

Nobody ever asks how much water

The entitlement pathway, and the year each building's approval was granted

0

of 243 data-center buildings has a Special Use Permit

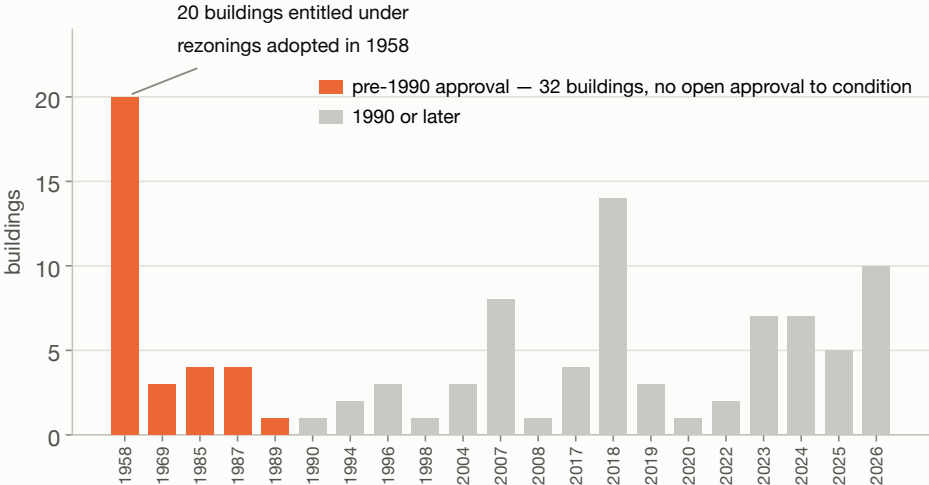

The SUP is the county's only discretionary review — the point at which conditions attach. It was never invoked.

REZ 92 · PLN 12 · SUP 0

139 buildings (57.2%) carry no case at all

172 of 243 sit inside the overlay,

where the use is permitted by right

Data centers are permitted by right inside the Data Center Opportunity Overlay District; a SUP is triggered only by exceeding the by-right envelope (height or floor-area ratio), never by the use itself. Where the approval predates the industry no water condition could have been contemplated, and an entitlement runs with the land. Where a data-center SUP does exist in the county record — Amazon Gainesville East — water quality was charged at \$4,390 against \$791,292 for fire and rescue, a factor of 180, while a licensed acoustical study of the cooling system was required twice per building.
